DOCKET: CNTR.2223

ABSTRACT OF THE DISCLOSURE

The present invention provides an apparatus and method for performing cryptographic operations on a plurality of input data blocks within a computing device, where the size cryptographic key that is employed is programmable. embodiment, apparatus for performing cryptographic an operations is provided. The apparatus includes cryptographic instruction and execution logic. The cryptographic instruction is received by a computing device as part of an instruction flow executing on the computing device. The cryptographic instruction prescribes one of the cryptographic operations, and also one of a plurality The execution of cryptographic key sizes. logic operatively coupled to the cryptographic instruction. The execution logic executes the one of the cryptographic operations. The execution logic has a cryptographic key size controller that employs the one of a plurality of cryptographic key sizes during execution of the one of the cryptographic operations.
